IRON ORE SEABORNE INDEX (IOSI)

Nov 3rd, 2021		CFR Qingdao, USD/dry tonne							MARKET COMMENTARY							
Index	Fe Content	Price	Change	Change %	MTD	YTD	Low ²	High ²	DCE iron ore futures continued to drop today, the main contract closed 589.5, an decrease of 0.42% throughout the day; The spot quotation in the morning almost kept steady, and some traders were not for sell, wait-and-see sentiment increased; Some steel mills purchasing enthusiasm is not high, today's overall market transaction atmosphere in general. PBF at Shandong port dealt 695-710 yuan/mt, increased 5-20 yuan/mt over yesterday; PBF at Jiangnei port dealt 710 yuan/mt, ; SSF at Tangshan port dealt 400-405 yuan/mt; ; SMM analysis, the port inventory of imported ore has exceeded 145 million mt, supply pressure is large. On the other hand, the environmental protection policy in northern China is further tightened, and the demand for iron ore is expected to decrease continuously. In this situation, the price of iron ore will not have a big chance to rebound.

IRON ORE INDEX SPECIFICATIONS, COMPILATION RATIONALE AND DATA EXCLUSIONS

Iron Ore Index Specifications (Port and Seaborne)					Iron Ore Index Compilation Rationale and Data Exclusions
	65% Fe Fines	62% Fe Fines	58% Fe Fines	62.5% Fe Lump	MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data. For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com
Fe %	65.00	62.00	58.00	62.50	
Alumina %	1.40	2.25	2.25	1.50

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
