	MARKET COMMENTARY														

Physical spot iron ore port stock quotes rose by 10-15 yuan/mt today as traders held offers firm even as many stood on the sidelines. With rising prices, concluded transactions fell as participants adopted a watch-and-wait stance. According to SMM, iron ore arrivals at Tangshan may increase next week and weigh on prices. However, the production cuts which were originally planned to go through October 18 seem to have been delayed, and this could buoy prices.

Payment Terms		L/C at sight		Seaborne index	0	0	0						
	IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY												

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
