IRON ORE SEABORNE INDEX (IOSI)

MARKET COMMENTARY

January 15th, 2020		CFR Qingdao, USD/dry tonne							SMM estimates that there were 87 vessels carrying 14.18 million mt of iron ore arrived at major Chinese ports during January 5-11, up 300,000 mt from the week ended January 4. This marked a second consecutive week of increase. During the same period, iron ore deliveries leaving Australian ports slumped 2.61 million mt on the week to 10.78 million mt, 3.57 million mt lower than the same period last year, as a hurricane and heavy rainfall disrupted the shipments. Shipments that departed Brazilian ports were also estimated to shrink, by 1.22 million mt on the week, to 4.06 million mt, down 3.64 million mt from the same period a year earlier. The continued decline in supply is expected to support near-term prices of seaborne iron ore. Although DCE iron ore futures moved lower, most traders held quotes firm. Transaction prices inched up over yesterday. As more market participants plan to start their holidays, the market is expected to be quieter moving forward.

IRON ORE INDEX SPECIFICATIONS, COMPILATION RATIONALE AND DATA EXCLUSIONS

Iron Ore Index Specifications (Port and Seaborne)					Iron Ore Index Compilation Rationale and Data Exclusions
	65% Fe Fines	62% Fe Fines	58% Fe Fines	62.5% Fe Lump	MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data. For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com
Fe %	65.00	62.00	58.00	62.50

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
