IRON ORE SEABORNE INDEX (IOSI)

MARKET COMMENTARY

August 13th 2019		CFR Qingdao, USD/dry tonne							Six steelmakers in China's Shandong province today agreed to cut production of around 400,000 mt steel products including rebar and wire rod, supporting both physical and futures markets. According to SMM, prices of Shandong steel prices climbed 50 yuan/mt on the back of the news though details about the production cut plan remain unclear so far. As cuts are expected to cut iron ore demand, the iron ore market continued to fall. Some traders are unwilling to enter the market and steel mills have been forced to buy due to the low ore inventories at the plants. Total transactions concluded rose today, providing some slight support to pricing.

IRON ORE INDEX SPECIFICATIONS, COMPILATION RATIONALE AND DATA EXCLUSIONS

Iron Ore Index Specifications (Port and Seaborne)					Iron Ore Index Compilation Rationale and Data Exclusions
	65% Fe Fines	62% Fe Fines	58% Fe Fines	62.5% Fe Lump	MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data. For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com
Fe %	65.00	62.00	58.00	62.50

Lump Index 62.5	0				
* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified					

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
