IRON ORE SEABORNE INDEX (IOSI)

MARKET COMMENTARY

September 18th, 2020		CFR Qingdao, USD/dry tonne							SMM data showed that iron ore stocks across 35 Chinese ports totaled 108.18 million mt as of September 18, up 890,000 mt from a week ago, but 3.76 million mt lower than a year ago. Daily average deliveries from the 35 ports increased 33,000 mt on a weekly basis and 43,900 mt on a yearly basis to 2.88 million mt this week. Sharp declines in arrivals lowered stocks across two ports in Tangshan, even as daily average deliveries from the two ports fell 37,000 mt from the previous week to 625,000 mt. Tianjin saw a slight increase in stocks due to the elimination of capacity at some local mills. Lower prices attracted steel mills in Shandong to purchase from ports. Deliveries from ports are likely to rise further this week amid pre-holiday stockpiling

IRON ORE INDEX SPECIFICATIONS, COMPILATION RATIONALE AND DATA EXCLUSIONS

Iron Ore Index Specifications (Port and Seaborne)					Iron Ore Index Compilation Rationale and Data Exclusions
	65% Fe Fines	62% Fe Fines	58% Fe Fines	62.5% Fe Lump	MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data. For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com
Fe %	65.00	62.00	58.00	62.50

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
