MARKET COMMENTARY

Iron ore physical port stock quotes were relatively stable though there were some signs of easing. Some traders stated that they were less willing to ease their offers as the DCE iron ore futures market rose in the afternoon. Sources say that BHP acknowledged that they may fail to meet their commitments on iron ore deliveries due to their recent train derailment. This could mean that about 5 million mt of iron ore supply could be cut a week until the issue is fixed.

MMI iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMI by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMI's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
