IRON ORE SEABORNE INDEX (IOSI)

December 17, 2018		CFR Qingdao, USD/dry tonne							MARKET COMMENTARY Seventy vessels carrying 10.04 million mt of iron ore are expected to arrive at major Chinese ports in the week ended December 20, down 440,000 mt from the week ended December 6, SMM data showed. While some small ports along the Yangtze River will receive greater arrivals, cargoes arriving at all major ports are likely to dip this week. Seaborne spot sales have picked up as bulls take the reigns, taking advantage of rising prices to shift some material and to rebuild the inventories at the port, anticipating higher demand in Q1'2019.

Iron Ore Index Specifications (Port and Seaborne)					Iron Ore Index Compilation Rational and Data Exclusions			
	65% Fe Fines	62% Fe Fines	58% Fe Fines	62.5% Fe Lump	MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMI by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data. IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
