## IRON ORE SEABORNE INDEX (IOSI)

## MARKET COMMENTARY

Dec 7th, 2021		CFR Qingdao, USD/dry tonne							DCE iron ore futures rose largely today, the main contract closed 659.5, an increase of 6.72% throughout the day, the quotation in the morning was increased by 30 yuan/mt over yesterday, and afternoon was increased 20 yuan/mt again. Some traders were active to sell, some steel mills tended to be wait-and-see, and purchasing enthusiasm is not high. Today's overall market transactions today to traders, trading volume increased slightly. PBF at Shandong port dealt 700-720 yuan/mt, increased 30-50 yuan/mt over yesterday; SSF at Shandong port dealt 455, increased 30 yuan/mt over yesterday; PBF at Tanshan port dealt 700-710 yuan/mt. Yesterday, The People's Bank of China lowered the RRR rate for financial institutions by 0.5 percentage point on December 15, 2021. Meanwhile, the Economic Blue Book published by the Chinese Academy of Social Sciences also boosted the confidence of the real estate sector, pushing up iron ore prices. On the other hand, the early steel work is insufficient, hot metal production is at a low level, the current steel profit recovery and crude steel reduction production completed ahead of schedule, steel production expectations are higher, there is also some support for the price of iron ore in the short term will continue to be strong shock.

## IRON ORE INDEX SPECIFICATIONS, COMPILATION RATIONALE AND DATA EXCLUSIONS

Iron Ore Index Specifications (Port and Seaborne)					Iron Ore Index Compilation Rationale and Data Exclusions
	<b>65% Fe Fines</b>	<b>62% Fe Fines</b>	<b>58% Fe Fines</b>	<b>62.5% Fe Lump</b>	MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.  For more details on MMi's iron ore methodology please download the guide published on our website at: <a href="http://www.mmiprices.com">www.mmiprices.com</a>

## IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
