IRON ORE SEABORNE INDEX (IOSI)

MARKET COMMENTARY

June 14th, 2019		CFR Qingdao, USD/dry tonne							As of June 14, iron ore stocks across 35 Chinese ports shrank 2.89 million mt from a week ago and 34.83 million mt from a year ago, and stood at 112.44 million mt, SMM statistics showed. This marked 10 consecutive weeks of decline. Low arrivals significantly reduced stocks across major ports. Daily average deliveries from the 35 ports fell 23,000 mt from a week ago, but grew 250,600 mt from a year ago, and stood at 2.69 million mt last week. Major ports in the east and north saw lower deliveries as higher prices of iron ore kept steel mills cautious about purchasing. Arrivals across major ports in the north are expected to inch up this week, and this will ease tight supplies.

IRON ORE INDEX SPECIFICATIONS, COMPILATION RATIONALE AND DATA EXCLUSIONS

Iron Ore Index Specifications (Port and Seaborne)					Iron Ore Index Compilation Rationale and Data Exclusions
	65% Fe Fines	62% Fe Fines	58% Fe Fines	62.5% Fe Lump	MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data. For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com
Fe %	65.00	62.00	58.00	62.50	
Alumina %	1.40	2.25	2.25	1.50

Lump Index 62.5	0				
* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified					

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
