MARKET COMMENTARY

Iron ore arrivals will decline for the first time in four consecutive weeks. Some 64 vessels with 9.49 million mt of iron ore are expected to arrive at major Chinese ports during September 7-13, down 1.02 million mt from 10.51 million mt during August 31- September 6. For the same period, volumes of iron ore departing Australian ports are likely to increase by 1.03 million mt to 15.79 million mt while those leaving Brazilian ports are likely to decrease by 130,000 mt to 7.01 million mt. Physical spot iron ore port stock quotes were relatively stable today, though DCE iron ore futures eased. Spot iron ore bid/offer spreads narrowed from Friday but concluded transactions today were few.

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
