PLATFORM TRADES AND TENDERS

MARKET COMMENTARY

Physical spot port stock quotes were relatively flat today as traders showed were unwilling to sell PB Fines below 535yuan/mt and 545yuan/mt at Shandong and Tangshan ports respectively. They maintain that the supply of mainstream ore from Australia at port will continue to decline. Considering the weak DCE market, mills are bidding lower, trying to take advantage of the tepid market.

The indices are calculated using detailed transaction-level data submitted to MMI by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data. IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
