## IRON ORE SEABORNE INDEX (IOSI)

May 23rd, 2023		CFR Qingdao, USD/dry tonne							MARKET COMMENTARY							
Index	Fe Content	Price	Change	Change %	MTD	YTD	Low <sup>2</sup>	High <sup>2</sup>	DCE iron ore futures market falling trends, the main contract I2309 closed 707, a decrease of 2.95% throughout the day; some traders were negative to sell, steel mills purchased on demand. today's overall market transaction atmosphere in general. PBF at Shandong port dealt 770-775 yuan/mt; decreased 5-10 yuan/mt over yesterday. PBF at Tangshan port dealt 800 yuan/mt; decreased 5-15 yuan/mt over yesterday. SSF at Tangshan port dealt 660 yuan/mt; decreased 10 yuan/mt over yesterday. Today on the Tangshan city in June will be a crude steel flat control rumors again, triggered the market for iron ore demand reduction concerns, superimposed recent iron ore supply growth, today DCE iron ore again sharply down 21.5 points. But steel mills inventory low, traders for steel mills replenishment still have expectations, spot prices have a certain support. However, terminal demand into the off-season, superimposed steel mill profit is still poor, suppress iron ore demand, short-term ore prices or continuation of weak shock operation.

## IRON ORE INDEX SPECIFICATIONS, COMPILATION RATIONALE AND DATA EXCLUSIONS

Iron Ore Index Specifications (Port and Seaborne)					Iron Ore Index Compilation Rationale and Data Exclusions
	<b>65% Fe Fines</b>	<b>62% Fe Fines</b>	<b>58% Fe Fines</b>	<b>62.5% Fe Lump</b>	MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.  For more details on MMi's iron ore methodology please download the guide published on our website at: <a href="http://www.mmiprices.com">www.mmiprices.com</a>
Fe %	65.00	62.00	58.00	62.50

## IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
