IRON ORE SEABORNE INDEX (IOSI)

MARKET COMMENTARY

Oct 13th, 2025		CFR Qingdao, USD/dry tonne							Today, iron ore futures initially fell but then rose, holding up well throughout the day. The most-traded contract 12601 closed at 804.5, up 1.13% WoW. Traders sold at market prices; with significant price fluctuations, steel mills cautiously observed and inquiries were generally subdued. Market transaction activity was sluggish. In Shandong, mainstream transaction prices for old PB fines were around 755-758 yuan/mt, up 3-5 yuan/mt from the previous trading day; in Tangshan, transaction prices for PB fines were 800-805 yuan/mt, up 3-5 yuan/mt from the previous trading day. Due to holiday factors, last week, SMM global iron ore shipments totaled 28.62 million mt, down nearly 20% WoW. SMM China iron ore arrivals totaled 20.89 million mt, down over 30% WoW. Iron ore supply pressure is relatively small. However, influenced by news of tariffs and the imposition of special port dues on vessels, iron ore prices first fell and then rose. Price volatility increased. In the short term, affected by news, futures fluctuated sharply. But from a fundamental perspective, current iron ore demand remains high, providing support for ore prices. Later, attention should be paid to the impact of changes in steel mill profits on hot metal.

					Lump Index 62.5	0		
					* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified			

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
