IRON ORE SEABORNE INDEX (IOSI)

MARKET COMMENTARY

Jun 10th, 2025		CFR Qingdao, USD/dry tonne							Today, Dalian iron ore futures jumped initially and then pulled back, operating in the doldrums throughout the day. The most-traded contract I2509 eventually closed at 698.5, with a daily decline of 0.85%. Traders' enthusiasm for selling was moderate, and steel mills mainly purchased as needed. The market transaction atmosphere was average. In the Shandong region, the mainstream transaction price of PB fines was around 720 yuan/mt, slightly dropping by 5-8 yuan/mt from yesterday's price. In the Tangshan region, the transaction price of PB fines was around 735 yuan/mt, slightly dropping by 5-10 yuan/mt from yesterday's price. Optimistic expectations from the morning's China-US-UK talks once drove iron ore prices to rebound slightly. However, as the news flow dried up in the afternoon, market sentiment weakened somewhat, and prices fell under pressure. Recently, the plum rain season has expanded its impact on downstream demand, increasing inventory pressure on finished steel products and leaving insufficient upward momentum for iron

IRON ORE INDEX SPECIFICATIONS, COMPILATION RATIONALE AND DATA EXCLUSIONS

Iron Ore Index Specifications (Port and Seaborne)					Iron Ore Index Compilation Rationale and Data Exclusions																				
Fe %	65% Fe Fines	62% Fe Fines	58% Fe Fines	62.5% Fe Lump	MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data. For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
