MARKET COMMENTARY

DCE iron ore futures rose by 1.68 % today, the main contract closed at 966.5. The steel mills are not active to purchase.The overall trading sentiment of the market is general. PBF at Shandong port deal 985-990 yuan/mt. PBF at Tangshan port deal 993-998 yuan/mt,increase 5-7yuan/mt. According to shipping data tracked by SMM, global shipping data has slightly decreased this week due to the fire incident in Vale last week. Vale stated that the accident will not affect the quarterly production plan and is expected to resume freight transportation in the short term, so the impact is relatively small. The arrival volume at major ports in China has also slightly decreased. Due to macroeconomic improvement, mining prices continue to rise; The fundamentals are not significant this week, so the price logic remains focused on the expected level. There are still important meetings in the short term, and we need to pay attention to the direction of emotions. It is expected that the short-term fluctuations in mining prices will be the main trend.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
