IRON ORE SEABORNE INDEX (IOSI)

MARKET COMMENTARY

Jan 2nd, 2025		CFR Qingdao, USD/dry tonne							Today, Dalian iron ore futures opened lower but closed higher, fluctuating upward throughout the day. The most-traded contract I2505 finally settled at 782 yuan/mt, rising slightly by 0.64% for the day. Traders showed moderate willingness to sell, while some steel mills purchased as needed. The market trading atmosphere was moderate today. In Shandong, the mainstream transaction prices of PB fines were around 780 yuan/mt, up by 5 yuan/mt compared to Tuesday; in Tangshan, the transaction prices of PB fines were 790-795 yuan/mt, also up by 5 yuan/mt compared to Tuesday. Industry data released today showed a turning point in total inventory, with a slight accumulation beginning. Apparent demand declined significantly, and the off-season effect became more evident. However, pig iron production is expected to stabilize next week, and raw material restocking by steel mills is anticipated to increase. Iron ore prices have some support and may continue a fluctuating upward trend in the short term.

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
