## IRON ORE SEABORNE INDEX (IOSI)

## MARKET COMMENTARY

Jan 3rd, 2025		CFR Qingdao, USD/dry tonne							MARKET COMMENTARY							
Index	Fe Content	Price	Change	Change %	MTD	YTD	Low <sup>2</sup>	High <sup>2</sup>	Today, iron ore futures dropped significantly. The most-traded I2505 contract closed at 764, down 2.18% for the day. Traders showed moderate willingness to sell. Steel mills began restocking ahead of the holiday, with procurement volume increasing significantly WoW. In Shandong, mainstream transaction prices for PB fines were around 763-768 yuan/mt, down 10-15 yuan/mt from yesterday. In Tangshan, PB fines transaction prices were 780 yuan/mt, also down 10-15 yuan/mt from yesterday. As of January 3, according to SMM monitoring, total inventory at 35 ports reached 145.22 million mt, up 240,000 mt WoW and up 25.92 million mt YoY. The daily port pick-up volume of imported ore averaged 3.08 million mt, down 47,000 mt WoW but up 140,000 mt YoY. During this period, port arrivals increased slightly, on the demand side, pig iron production from steel mills' blast furnaces declined, and the restocking pace was not evident, leading to a slight decrease in port pick-up volume. Overall, port inventory increased slightly this week. Looking ahead to next week, port arrivals are expected to increase slightly. As the year-end approaches, steel mills may accelerate restocking, which could lead to a rise in port pick-up volume and a potential destocking trend at ports, providing support for spot prices.

## IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
