IRON ORE SEABORNE INDEX (IOSI)

MARKET COMMENTARY

May 19th, 2025		CFR Qingdao, USD/dry tonne							Today, the DCE Iron Ore futures continued to operate in the doldrums, with the most-traded contract I2509 closing at 722.5, down 0.89% for the day. Traders' enthusiasm for selling was moderate; steel mills adopted a cautious wait-and-see attitude and purchased as needed. The market transaction atmosphere was average. In the Shandong region, the mainstream transaction prices of P8 fines were around 760-765 yuan/mt, down 0-5 yuan/mt from last Friday. In the Tangshan region, the transaction prices of P8 fines were approximately 770-775 yuan/mt, down 5-10 yuan/mt from last Friday. Last week, SMM shipping data showed that global iron ore shipments increased slightly by 2.42 million mt to 34.05 million mt. Among them, shipments from Australia and non-mainstream countries increased slightly. Brazil's shipments decreased slightly. This week, port arrivals decreased slightly by 540,000 mt to 26.27 million mt, with overall supply remaining at a moderate level and having some room for growth in the future. The impact on ore prices was limited. However, today's release of real estate and macro data showed a decline on a WoW basis.

Note: 1. Costs in the table are calculated based on today's market prices and facout our management, sales, financial and depreciations fe
2. The cost refers to average cost in the industry based on SMM's survey of small, medium and large mills in China

IRON ORE INDEX SPECIFICATIONS, COMPILATION RATIONALE AND DATA EXCLUSIONS

Iron Ore Index Specifications (Port and Seaborne)					Iron Ore Index Compilation Rationale and Data Exclusions
Fe %	65% Fe Fines	62% Fe Fines	58% Fe Fines	62.5% Fe Lump	MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data. For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com
Alumina %	65.00	62.00	58.00	62.50

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
