MARKET COMMENTARY

DCE iron ore futures market roseing sharply trends ，the main contract closed 815.5,an increase of 5.65% throughout the day. Trade merchants generally have good expectations for the future market, while steel mills have moderate acceptance of current high prices and mainly focus on purchasing based on demand. The overall market transactions are still acceptable. In Shandong, the transaction price of PB powder is in the range of 817-823, which has increased by 10-15 yuan compared to yesterday. According to SMM statistics, the impact of blast furnace maintenance on molten iron this week (April 6th to April 12th) is 180.77 million tons, a decrease of 6.55 million tons compared to last week. Next week (April 13th to April 19th), the impact of blast furnace maintenance on molten iron is expected to be 177.27

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
