IRON ORE SEABORNE INDEX (IOSI)

MARKET COMMENTARY

Aug 19th, 2025		CFR Qingdao, USD/dry tonne							Today, the most-traded iron ore futures contract fluctuated rangebound, with the I2601 contract closing at 771, down 0.64% from yesterday. Traders sold according to market conditions, and some traders showed a strong willingness to sell, due to month-end production restrictions, steel mills in north China had weak purchase willingness. The market transaction atmosphere was average. In Shandong, mainstream transaction prices for PB fines were around 768-771 yuan/mt, basically stable compared to yesterday's prices; in Tangshan, transaction prices for PB fines were around 780-785 yuan/mt, also basically stable compared to yesterday. According to an SMM survey, environmental protection-driven production restrictions during the September 3 parade in Hebei have been largely confirmed. In addition to sintering machine production restrictions, blast furnaces in Tangshan and Handan will also be shut down, and some steel mills have already scheduled blast furnace maintenance, which is expected to significantly reduce hot metal production. Furthermore, transportation vehicles in the Beijing-Tianjin-Hebei region will face strict controls, leading to a noticeable suppression of short-term iron ore demand, and prices may continue to be in the doldrums.

2. The cost refers to average cost in the industry based on SMM's survey of small, medium and large mills in China

IRON ORE INDEX SPECIFICATIONS, COMPILATION RATIONALE AND DATA EXCLUSIONS

Iron Ore Index Specifications (Port and Seaborne)					Iron Ore Index Compilation Rationale and Data Exclusions
	65% Fe Fines	62% Fe Fines	58% Fe Fines	62.5% Fe Lump	MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMI by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
