MARKET COMMENTARY

Aug 20th, 2024		CFR Qingdao, USD/dry tonne							MARKET COMMENTARY							
Index	Fe Content	Price	Change	Change %	MTD	YTD	Low ²	High ²	Iron ore futures fluctuated strongly, with the most-traded contract I2501 closing at 710.5 yuan/mt, up 1.21% for the day. Traders followed the market trend to sell. Steel mills were cautiously observing, mainly making small and frequent purchases. The overall market transaction atmosphere was relatively average today. In Shandong, PB fines traded at 705-710 yuan/mt, basically flat compared to yesterday's prices; in Tangshan, PB fines traded at 720-725 yuan/mt, up 0-5 yuan/mt from yesterday's prices. Recently, although market pessimism has eased somewhat and the market has rebounded slightly, pig iron production remains on a downward trend, and end-user demand has not improved, resulting in insufficient momentum for iron ore prices to rise. Under the pressure of negative feedback, iron ore prices fluctuated at low levels.

IRON ORE INDEX SPECIFICATIONS, COMPILATION RATIONALE AND DATA EXCLUSIONS

Iron Ore Index Specifications (Port and Seaborne)					Iron Ore Index Compilation Rationale and Data Exclusions
	65% Fe Fines	62% Fe Fines	58% Fe Fines	62.5% Fe Lump	MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data. For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
