MARKET COMMENTARY

Today, the Dce experienced a high-level retreat, with the main contract I2601 settling at 794, down 0.19% compared to the previous trading day. Traders followed market trends in selling, while steel mills reduced inquiries and showed moderate purchasing interest. Market transaction activity remained sluggish. In the Shandong region, the transaction price for PB fines ranged from 793 to 798 yuan, down 0–5 yuan per ton compared to yesterday. In the Hebei region, the transaction price for PB fines ranged from 800 to 805 yuan per ton, down 1–4 yuan per ton compared to yesterday.

Today's SMM port departure volume data continued to decline, indicating a further reduction in steel mills' purchasing willingness. Port inventories have accumulated once again, adding to supply pressure. With expectations of a further decline in hot metal production next week, overall demand for iron ore is weakening further. It is anticipated that iron ore prices may trend weaker. However, considering the impact of macroeconomic news and the approaching delivery period, the spot-futures spread is expected to narrow, making a significant decline in futures prices unlikely.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
