MARKET COMMENTARY

DCE iron ore futures traded sideways. the main contract closed 801 , remaining flat throughout the day.; Traders' enthusiasm for quoting prices remained weak, and steel mills restocked as needed. today's overall market transaction atmosphere in general. PBF at Shandong port dealt 795-800 yuan/mt; the same as yesterday. PBF at Tangshan port dealt 810-815 yuan/mt; the same as yesterday. According to the [SMM Weekly Maintenance Statistics], this week the impact of blast furnace maintenance on pig iron output was 1.0221 million mt, down 31,900 mt from the previous week. In the short term, pig iron output continues to show a slight upward trend and has reached a relatively high YoY level, providing some support for iron ore prices. However, recent heavy rains and high temperatures in many regions have weakened demand for finished steel. Coupled with a lack of positive news on the macro front, iron ore prices are expected to continue to fluctuate weakly in the short term. According to the SMM weekly maintenance statistics, from June 22 to June 28, the impact of blast furnace maintenance on pig iron output was 1.0221 million mt, down 31,900 mt from the previous week. In the short term, pig iron output continues to show a slight upward trend and has reached a relatively high YoY level, providing some support for iron ore prices. However, recent heavy rains and high temperatures in many regions have weakened steel demand. Coupled with a lack of positive news on the macro front, iron ore prices are expected to continue to fluctuate weakly in the short term.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
