## IRON ORE SEABORNE INDEX (IOSI)

## MARKET COMMENTARY

Jun 28th, 2023		CFR Qingdao, USD/dry tonne							DCE iron ore futures continued to fluctuate in a day by 2.47%. The main contract I2309 closed 830.5. Some traders were active to sell, but some steel mills tended to be wait-and-see, and purchasing enthusiasm is not high. Total transactions remained insipid. PBF at Shandong port dealt 865-872 yuan/mt; decreased 0-3 yuan/mt over yesterday. SFF at Tangshan port dealt 732 yuan/mt; According to data released by the National Statistical Database today, the profits of industrial enterprises above designated size nationwide decreased by 12.6% year-on-year in May, which is narrower than in April. And it has been continuously narrowing for three months, and the overall profit of the enterprise has shown a steady recovery trend. Adding to the impact of yesterday's policies, the improvement in sentiment continued, and iron ore continued to operate in a strong and volatile manner. The data may be relatively weak, market sentiment may weaken, and ore prices may fluctuate under pressure.

## IRON ORE INDEX SPECIFICATIONS, COMPILATION RATIONALE AND DATA EXCLUSIONS

Iron Ore Index Specifications (Port and Seaborne)					Iron Ore Index Compilation Rationale and Data Exclusions
	65% Fe Fines	62% Fe Fines	58% Fe Fines	62.5% Fe Lump	
Fe %	65.00	62.00	58.00	62.50	MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.  For more details on MMi's iron ore methodology please download the guide published on our website at: <a href="http://www.mmiprices.com">www.mmiprices.com</a>
Alumina %	1.40	2.25	2.25	1.50

## IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
