IRON ORE SEABORNE INDEX (IOSI)

MARKET COMMENTARY

Jan 22nd, 2025		CFR Qingdao, USD/dry tonne							Today, iron ore fluctuated upward. The most-traded contract I2505 finally closed at 800.5 yuan/mt, down 0.44% throughout the day. Traders showed moderate willingness to sell. Steel mills remained cautious and inquiries were limited. The market transaction atmosphere was moderate today. In Shandong, the mainstream transaction prices of PB fines were 788-792 yuan/mt, down 5 yuan/mt from yesterday. According to an SMM survey, as of January 22, the operating rate of blast furnaces at 242 steel mills surveyed by SMM was 85.60%, up 0.46 percentage points MoM. The capacity utilisation rate of blast furnaces was 87.85%, up 0.87 percentage points MoM. The daily pig iron production of sample steel mills was 2.3641 million mt, up 15,300 mt MoM. Currently, pig iron production at steel mills continues to rise, providing some support for the demand for iron ore concentrates. It is expected that iron ore prices may fluctuate upward in the short term.

IRON ORE INDEX SPECIFICATIONS, COMPILATION RATIONALE AND DATA EXCLUSIONS

Iron Ore Index Specifications (Port and Seaborne)					Iron Ore Index Compilation Rationale and Data Exclusions
	65% Fe Fines	62% Fe Fines	58% Fe Fines	62.5% Fe Lump	<p>MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.</p> <p>For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com</p>

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
