IRON ORE SEABORNE INDEX (IOSI)

MARKET COMMENTARY

Sep 1st, 2025		CFR Qingdao, USD/dry tonne							Iron ore futures plunged today, with the most-traded contract I2601 closing at 766 yuan, down 2.67% from the previous trading day. Traders' willingness to sell weakened, while steel mills' walk-and-see sentiment intensified, with purchase willingness remaining moderate at the start of the week. Market transactions were sluggish. In Shandong, mainstream transaction prices for PB fines stood at 760-765 yuan/mt, down 10-15 yuan/mt WoW. In Tangshan, PB fines traded around 770-775 yuan/mt, down 15-20 yuan/mt WoW. As the 93rd military parade approaches, blast furnace maintenance at steel mills in Tangshan, Hebei has increased again. Meanwhile, Henan also introduced production restrictions, with most mills limiting sintering output by 30-50% and some blast furnaces undergoing 3-5 days of shutdowns. This led to an expanded decline in hot metal production this week, significantly weakening iron ore demand. Coupled with market rumors about potential crude steel output reduction policies in September, overall sentiment remained pessimistic. However, considering the expected recovery in hot metal production over the weekend, overall iron ore demand is likely to remain high. Although supply growth is anticipated, short-term inventory drawdowns continue, with limited supply-demand imbalance. Iron ore prices are expected to rebound after short-term corrections.

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
