IRON ORE SEABORNE INDEX (IOSI)

MARKET COMMENTARY

Jun 24th, 2025		CFR Qingdao, USD/dry tonne							Today, DCE iron ore futures opened with a slight drop, with the most-traded contract I2509 eventually closing at 703 yuan/mt, down 0.42% for the day. Traders sold goods in line with market conditions. Steel mills showed a strong desire to bargain down prices, with transactions mainly concluded at lower prices. The market transaction atmosphere was average. The mainstream transaction prices of PB fines in Shandong were around 702-705 yuan/mt, down 5-8 yuan/mt from yesterday's prices. In Tangshan, the transaction prices of PB fines were around 710-715 yuan/mt, also down 5-8 yuan/mt from yesterday's prices. Today, affected by the Middle East conflict, iron ore prices were in the doldrums. However, due to relatively small industrial contradictions and fundamental support, the decline in futures prices was limited. Currently, there is an abundant supply of spot ore resources in the market, and the selling of some varieties at lower prices has led to the spread between futures and spot prices narrowing to parity. Considering the slight

2. The cost refers to average cost in the industry based on SMM's survey of small, medium and large mills in China

IRON ORE INDEX SPECIFICATIONS, COMPILATION RATIONALE AND DATA EXCLUSIONS

Iron Ore Index Specifications (Port and Seaborne)					Iron Ore Index Compilation Rationale and Data Exclusions
Fe %	65% Fe Fines	62% Fe Fines	58% Fe Fines	62.5% Fe Lump	MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
