IRON ORE SEABORNE INDEX (IOSI)

MARKET COMMENTARY

Sep 19th, 2025		CFR Qingdao, USD/dry tonne							Iron ore futures held up well today, with the most-traded contract I2601 closing at 807.5, up 0.81% WoW. Traders showed a strong willingness to sell, while steel mills remained cautious and observed the market, with purchase willingness declining from yesterday. Market transaction sentiment was moderate. In Shandong, mainstream transaction prices for old grade PB fines were 795-800 yuan/mt, up 5-10 yuan/mt from yesterday; new-grade PB fines traded around 790 yuan/mt. In Tangshan, transaction prices for PB fines were 805-810 yuan/mt, up 5-10 yuan/mt from yesterday. As of September 19, SMM statistics showed that iron ore inventory across 35 ports nationwide totaled 129.91 million mt, down 500,000 mt WoW. Meanwhile, daily average port pick-up volume for imported ore increased by 63,000 mt WoW to 3.113 million mt. Recent pre-holiday stockpiling by steel mills has led to active procurement, driving port pick-up volume higher. This trend is expected to continue next week, further supporting ore prices. Additionally, the market responded positively to tonight's China-US talks, which will also provide some support to futures. Ore prices are expected to maintain a strong performance next week, though upside room may be limited by environmental protection-driven production restrictions and policy pressures such as "anti-involution," with bullish and bearish factors intertwined.

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
