IRON ORE SEABORNE INDEX (IOSI)

MARKET COMMENTARY

| Dec 23rd, 2024 | | CFR Qingdao, USD/dry tonne | | | | | | | Today, The iron ore futures opened lower but closed higher, fluctuating upward throughout the day. The most-traded 12505 contract finally settled at 780 yuan/mt, up 0.84% for the day. Some traders with higher costs showed weak willingness to sell, while steel mills remained cautious with weak purchase willingness. Market transactions were sluggish today. In Shandong, mainstream transaction prices for PB fines were 775-778 yuan/mt, up 5 yuan/mt WoW from last Friday. In Tangshan, transaction prices for PB fines were 785-790 yuan/mt, up 5-10 yuan/mt WoW from last Friday. SMM reported global iron ore shipments at 32.53 million mt, up 1.8% WoW. Among them, Australian shipments decreased slightly by 4.3% WoW, while Brazil's shipments surged significantly by 29.6% WoW. With previous influencing factors resolved, Brazil's shipments increased notably this week. Iron ore supply remains ample. Additionally, pig iron production is still expected to decline this week. Considering that steel mills have gradually started pre-holiday restocking, traders' sentiment to stand firm on quotes is relatively strong, which may provide some short-term support for ore prices. |

IRON ORE INDEX SPECIFICATIONS, COMPILATION RATIONALE AND DATA EXCLUSIONS

| Iron Ore Index Specifications (Port and Seaborne) | | | | | Iron Ore Index Compilation Rationale and Data Exclusions |
|--|---|---------------------|--|----------------------|--|
| | 65% Fe Fines | 62% Fe Fines | 58% Fe Fines | 62.5% Fe Lump | MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data. For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com |
| Fe % | 65.00 | 62.00 | 58.00 | 62.50 | |

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
