Today, DCE Iron ore futures market fluctuated downward. The most-traded contract I2505 closed at 785.5, with a daily decline of 0.19%. Traders followed the market to sell goods. As the weekend approached and ore prices fell, steel mills were cautious and mainly observed, with poor purchase willingness. The market transaction atmosphere was sluggish. In Shandong, the mainstream transaction price of P8 fines was around 785 yuan/mt, down 0.3 yuan/mt from yesterday. In Tangshan, the transaction price of P8 fines was around 795 yuan/mt, down 0.5 yuan/mt from yesterday. As of March 28, SMM data showed that the total inventory of 35 ports was 142.02 million mt, up 580,000 mt WoW and 1.84 million mt YoY. The daily average port pick-up volume of imported ore was 3.018 million mt, up 96,000 mt WoW and 240,000 mt YoY. This week, pig iron production continued to rise, and the demand for iron powder from steel mills drove a slight increase in port pick-up volume. However, the increase in arrivals this week was more significant. Port inventory showed a slight increase. Looking ahead to next week, there is still room for

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
