## IRON ORE SEABORNE INDEX (IOSI)

## MARKET COMMENTARY

Mar 24th, 2026		CFR Qingdao, USD/dry tonne							Dallan iron ore futures strengthened during the morning session before paring gains in the afternoon. The most-traded I2605 contract settled at 824 RMB per tonne, representing a 0.55% increase from the prior trading day. In the physical market, spot prices increased by approximately 2-5 RMB. Trading houses were relatively active in offering quotations; however, enquiries from steel mills were limited, and their procurement strategies remained cautious, resulting in moderate transaction volumes. On a fundamental basis, the intensity of blast furnace maintenance has continued to decline this week. The volume of hot metal production affected by maintenance stood at 1.65 million tonnes, a week-on-week reduction of 206,500 tonnes. This figure is projected to decrease by a further 180,000 tonnes next week to 1.4684 million tonnes, indicating a progressive improvement on the demand side. Concurrently, tight supply conditions persist with no significant news of adjustments, which continues to exert a bullish influence on iron ore in the short term. Nevertheless, some capital is being held back due to concerns over future market risks, leading to a prevalent wait-and-see sentiment. In summary, it is anticipated that iron ore prices will maintain a high-level consolidation pattern in the near term.

## IRON ORE INDEX SPECIFICATIONS, COMPILATION RATIONALE AND DATA EXCLUSIONS

Iron Ore Index Specifications (Port and Seaborne)					Iron Ore Index Compilation Rationale and Data Exclusions
	<b>65% Fe Fines</b>	<b>62% Fe Fines</b>	<b>58% Fe Fines</b>	<b>62.5% Fe Lump</b>	MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to Mmi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.
Fe %	65.00	62.00	58.00	62.50	
Alumina %	1.40	2.25	2.25	1.50

## IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
