MARKET COMMENTARY

DCE iron ore futures moved in the doldrums today. The most-traded contract I2601 closed at 784, down 1.57% from the previous trading day. Traders showed low motivation to sell; steel mills had completed restocking and adopted a cautious wait-and-see stance, with weak purchase willingness. Market transactions were sluggish. In Shandong, mainstream transaction prices for old spec PB fines were around 780 yuan/mt, down 0–3 yuan/mt from the previous day; in Tangshan, PB fines traded at 785–790 yuan/mt, basically stable compared with the previous day.

Last week, SMM global iron ore shipments totaled 36.1 million mt, down 1.56 million mt WoW, a slight decrease of 4.1%. The decline was mainly due to reduced shipments from Australia and Brazil, while shipments from non-mainstream mines increased slightly. SMM iron ore arrivals in China amounted to 27.51 million mt, up 3.54 million mt WoW, an increase of nearly 15%. Pre-holiday risk aversion sentiment intensified, iron ore open interest declined, price fluctuations were relatively small, and the short-term trend may maintain a sideways movement.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
