IRON ORE SEABORNE INDEX (IOSI)

MARKET COMMENTARY

May 29th, 2024		CFR Qingdao, USD/dry tonne							DCE iron ore futures fell today, the main contract closed 891, a decrease of 1.11% throughout the day. Some traders ship according to market conditions; Some steel procurement more cautious, the continuation of a small number of multi-frequency procurement strategy. Today's overall market transaction atmosphere in general. PBF at Shandong port dealt 875-885 yuan/mt; decreased 0-5 yuan/mt over yesterday. PBF at Tangshan port dealt 885-890 yuan/mt; decreased 0-10 yuan/mt over yesterday. This week, the pig iron production of SMM sample 190 steel mills slightly increased by 8800 tons. This week, three blast furnaces resumed production, and the planned maintenance of the blast furnaces was delayed, resulting in an increase in molten iron. In the future, as terminal demand enters the off-season, some steel mills have maintenance plans, and it is expected that the production of molten iron may shrink in June. However, considering the radiation of real estate policies to first tier cities and the relatively optimistic market sentiment, it is expected that mining prices will fluctuate at high levels in the short term.

IRON ORE INDEX SPECIFICATIONS, COMPILATION RATIONALE AND DATA EXCLUSIONS

Iron Ore Index Specifications (Port and Seaborne)					Iron Ore Index Compilation Rationale and Data Exclusions
	65% Fe Fines	62% Fe Fines	58% Fe Fines	62.5% Fe Lump	MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data. For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com
Fe %	65.00	62.00	58.00	62.50

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
