DCE iron ore futures open lower and go lower, futures market falling trends, the main contract closed 806, an decrease of 4.16% throughout the day; Part of the business quotation shipping mentality turn weak; Some steel mills tended to be wait-and-see, and purchased on demand, total transactions remained inquisit. P&F at Shandong port dealt 805-815 yuan/mt; decreased 20-25 yuan/mt from last Friday. P&F at Tangshan port dealt 830-840 yuan/mt; decreased 15-20 yuan/mt from last Friday.
Last Friday, the US May non-farm payrolls data was released, showing an increase of 272,000 jobs, far exceeding expectations. This reduced the likelihood of a rate cut by the US Fed. The US dollar index surged, leading to a significant drop in the prices of dollar-denominated products such as non-ferrous metals and iron ore. From the perspective of iron ore fundamentals, according to SMM shipping data, global iron ore shipments decreased slightly by 1.5% last week. Although port inventories are accumulating, the rate has significantly slowed, indicating that the fundamental pressure on iron ore is not substantial. However, downstream demand has recently declined significantly due to weather and the impact of mid-term and college entrance exams. It is expected that iron ore prices may experience weak and volatile performance in the short term.

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
