## IRON ORE SEABORNE INDEX (IOSI)

## MARKET COMMENTARY

Jan 14th, 2025		CFR Qingdao, USD/dry tonne							Iron ore futures fluctuated upward after opening today. The most-traded I2505 contract finally closed at 783 yuan/mt, up 2.22% for the day. Traders showed a good willingness to sell. Steel mills were cautious in procurement, with strong sentiment of wait-and-see. Today's market transaction atmosphere was average. In Shandong, mainstream transaction prices for PB fines were at 780-785 yuan/mt, up 10-15 yuan/mt from yesterday; in Tangshan, transaction prices for PB fines were around 800-805 yuan/mt, also up 10-15 yuan/mt from yesterday. Macro news increased today, and market sentiment continued to recover. Iron ore followed the upward fluctuation of black commodities. In the short term, supported by pre-holiday restocking, iron ore demand remains strong. It may continue to fluctuate upward.

## IRON ORE INDEX SPECIFICATIONS, COMPILATION RATIONALE AND DATA EXCLUSIONS

Iron Ore Index Specifications (Port and Seaborne)					Iron Ore Index Compilation Rationale and Data Exclusions
	<b>65% Fe Fines</b>	<b>62% Fe Fines</b>	<b>58% Fe Fines</b>	<b>62.5% Fe Lump</b>	MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.  For more details on MMi's iron ore methodology please download the guide published on our website at: <a href="http://www.mmiprices.com">www.mmiprices.com</a>
Fe %	65.00	62.00	58.00	62.50

## IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
