IRON ORE SEABORNE INDEX (IOSI)

MARKET COMMENTARY

Jul 8th, 2024		CFR Qingdao, USD/dry tonne							DCE iron ore futures market falling sharply trends, the main contract closed 825.5, a decrease of 3.34% throughout the day, some traders were negative to sell. Some steel mills few inquiries, and purchased on demand, total transactions remained insipid. PBF at Shandong port dealt 820-825 yuan/mt, decreased 10-20 yuan/mt from last Friday, PBF at Tangshan port dealt 835 yuan/mt, decreased 15-20 yuan/mt from last Friday. Last week, SMM's global iron ore shipments totaled 34.32 million tons, a decrease of 2.3% compared to the previous week. Both Australia and Brazil experienced a decline in shipments. The total amount of iron ore arriving at SMMI China's port was 24 million tons, a decrease of 6.03% compared to the previous month. Overall, the shipment and arrival of iron ore are still at a high level; based on the maintenance situation of SMM's blast furnace this week, it is estimated that the molten iron will slightly decline. Iron ore inventory may continue to accumulate. In addition, due to the off-season of terminal demand, market concerns about demand remain, resulting in a significant decline in the market. However, as important meetings approach, the market still has certain expectations to support mining prices, making it difficult to open up short-term downward space and may continue to fluctuate.

IRON ORE INDEX SPECIFICATIONS, COMPILATION RATIONALE AND DATA EXCLUSIONS

Iron Ore Index Specifications (Port and Seaborne)					Iron Ore Index Compilation Rationale and Data Exclusions
	65% Fe Fines	62% Fe Fines	58% Fe Fines	62.5% Fe Lump	<p>MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.</p> <p>For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com</p>

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
