IRON ORE SEABORNE INDEX (IOSI)

MARKET COMMENTARY

Nov 10th, 2023		CFR Qingdao, USD/dry tonne							DCE iron ore futures rose by 2.56 % today, the main contract closed at 961.5. The steel mills are not active to purchase. The overall trading sentiment of the market is less. As of November 10th, the total inventory of 35 ports tracked by SMM was 110.75 million tons, a cumulative 3.2 million tons compared to last week and a decrease of 19.45 million tons compared to the same period last year. The daily average dredging volume of imported mines in this period increased by 71000 tons to 2.892 million tons on a weekly basis compared to last week. This week, China's iron ore arrivals to Hong Kong increased month on month, and macro stimulus prices have once again surged, highlighting the buying and selling psychology. Market trading has rebounded. Some East China ports have seen an increase in exports, while some steel mills have been actively picking up goods, resulting in an increase in port clearance this week. The subsequent overseas shipments in the fourth quarter are in a relaxed stage, but the proportion of shipments to China is not high, and it is expected that the increase in supply side will be limited. The market has recently risen with strong resilience, and it is necessary to pay attention to emotional factors and be cautious of the risk of a pullback.

IRON ORE INDEX SPECIFICATIONS, COMPILATION RATIONALE AND DATA EXCLUSIONS

Iron Ore Index Specifications (Port and Seaborne)					Iron Ore Index Compilation Rationale and Data Exclusions																				
Fe %	65% Fe Fines	62% Fe Fines	58% Fe Fines	62.5% Fe Lump	MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data. For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
