MARKET COMMENTARY

DCE iron ore futures open higher and go lower, futures fall today by 1.76%. the main contract I2405 closed 948.5.some traders were negative to sell, Some steel mills tended to be wait-and-see, and purchased on demand. today's overall market transaction atmosphere in general. PBF at Shandong port dealt 1018-1025 yuan/mt; decreased 5-12 yuan/mt over yesterday; PBF at Tangshan port dealt 1040 yuan/mt; decreased 5 yuan/mt over yesterday; The total inventory of 35 ports tracked by SMM is 122.85 million tons, with a month on month accumulation of 3.54 million tons; 7.34 million tons of inventory were removed year-on-year; The daily average port clearance volume of imported ore in this period increased by 64000 tons to 3.001 million tons on a weekly basis. The continued increase in port clearance indicates an increase in the procurement volume of steel mills, which will continue to replenish their inventory. But currently, the accumulation of inventory in ports is relatively large, and the production of molten iron is low, which weakens the support for mineral prices. The opinions on building a beautiful China have had an impact on sentiment, and iron ore prices continue to decline.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
