## IRON ORE SEABORNE INDEX (IOSI)

Dec 31st, 2024		CFR Qingdao, USD/dry tonne							MARKET COMMENTARY							
Index	Fe Content	Price	Change	Change %	MTD	YTD	Low <sup>2</sup>	High <sup>2</sup>	Today, Dalian iron ore fluctuated upward throughout the day. The most-traded I2505 contract finally closed at 779, rising slightly by 1.17% for the day. Traders followed the market trend to sell goods, while steel mills remained cautious with fewer inquiries. The market transaction atmosphere was sluggish today. In Shandong, the mainstream transaction prices of PB fines were around 775 yuan/mt, remaining stable compared to yesterday; in Tangshan, the transaction prices of PB fines were 785-790 yuan/mt, also stable compared to yesterday. There was no macro news in the market today. From a fundamental perspective, the operating rate of blast furnaces at 242 steel mills surveyed by SMM was 85.37%, down 0.1 percentage points WoW. The daily pig iron production of sample steel mills was 2.3446 million mt, down 3,000 mt WoW. This week, overall demand for iron ore declined again. However, due to the expectation of pre-holiday restocking, ore prices continued to remain relatively stable.

## IRON ORE INDEX SPECIFICATIONS, COMPILATION RATIONALE AND DATA EXCLUSIONS

Iron Ore Index Specifications (Port and Seaborne)					Iron Ore Index Compilation Rationale and Data Exclusions
	<b>65% Fe Fines</b>	<b>62% Fe Fines</b>	<b>58% Fe Fines</b>	<b>62.5% Fe Lump</b>	<p>MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.</p> <p>For more details on MMi's iron ore methodology please download the guide published on our website at: <a href="http://www.mmiprices.com">www.mmiprices.com</a></p>
Fe %	65.00	62.00	58.00	62.50

## IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
