IRON ORE SEABORNE INDEX (IOSI)

MARKET COMMENTARY

Jul 22nd, 2024		CFR Qingdao, USD/dry tonne							DCE iron ore futures fell today, the main contract closed 804.5, an decrease of 0.19% throughout the day, some traders were negative to sell, Some steel procurement more cautious, the continuation of a small number of multi-frequency procurement strategy. PBF at Shandong port dealt 795-805 yuan/mt, decreased 5 yuan/mt over yesterday. PBF at Tangshan port dealt 825-830 yuan/mt, decreased 5 yuan/mt over yesterday. As of July 12th, the total inventory of 35 ports tracked by SMM was 147.59 million tons, an increase of 1.38 million tons month on month and 25.55 million tons year-on-year; The daily average port clearance of imported mines was 3.018 million tons, a decrease of 7000 tons compared to the previous period and a decrease of 3000 tons compared to the same period last year. The price decline and weak purchasing willingness of steel mills have dragged down the daily average port clearance volume, resulting in the accumulation of port inventory suppressing iron ore prices. Considering the low season of terminal demand and lack of market confidence, short-term mineral prices may continue to fluctuate weakly.

2. The cost refers to average cost in the industry based on SMM's survey of small, medium and large mills in China

IRON ORE INDEX SPECIFICATIONS, COMPILATION RATIONALE AND DATA EXCLUSIONS

Iron Ore Index Specifications (Port and Seaborne)					Iron Ore Index Compilation Rationale and Data Exclusions																				
Fe %	65% Fe Fines	62% Fe Fines	58% Fe Fines	62.5% Fe Lump	MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data. For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
