MARKET COMMENTARY

Iron ore experienced a weak and volatile trend today, with the main contract I2605 closing at 760.5, down by 1.43% compared to the previous trading day. Traders adjusted their shipments according to market conditions, while steel mills remained cautious and took a wait-and-see approach, showing limited purchasing interest. Market transactions were sluggish. In the Shandong region, the transaction price for PB fines ranged between 780–785 yuan, down by 0–5 yuan per ton from last Friday. In the Hebei region, the transaction price for PB fines ranged between 790–795 yuan per ton, also down by 0–5 yuan per ton from last Friday.

Last week, SMM reported that global iron ore shipments totaled 35.87 million tons, an increase of 2.57 million tons from the previous week, representing a growth of 7.7%. During this period, shipments from Australia saw a significant rise, while those from Brazil and non-mainstream sources experienced a slight decline. SMM data showed that iron ore arrivals in China amounted to 26.88 million tons, down by 340,000 tons from the previous week, a slight decrease of 1.2%. Iron ore supply continued to exert pressure. On the demand side, SMM estimated that the average daily hot metal production this week showed a larger decline compared to the previous week. Additionally, market rumors today suggested that negotiations between China Minmetals and BHP are nearing completion. If the negotiations conclude and restricted products are suddenly released into the market, concerns about potential selling pressure could further weigh on iron ore prices. Given the ongoing macroeconomic support expected this week, the downside for iron ore prices appears limited, and a weak and volatile trend may persist in the short term.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
