IRON ORE SEABORNE INDEX (IOSI)

MARKET COMMENTARY

Sep 22nd, 2025		CFR Qingdao, USD/dry tonne							Iron ore futures held up well today, with intraday performance slightly weakening. The most-traded contract (2601) closed at 808.5, up 0.37% from the previous trading day. Traders showed moderate willingness to sell; steel mills exhibited increased wait-and-see sentiment, with purchase willingness remaining moderate on Monday. Market transaction atmosphere was moderate. In Shandong, mainstream transaction prices for old PB fines were around 800 yuan/mt, up 0-5 yuan/mt from yesterday; new PB fines traded around 788-790 yuan/mt. In Tangshan, transaction prices for PB fines were 805-810 yuan/mt, flat from last Friday. Last week, SMM global iron ore shipments totaled 37.66 million mt, up 3.92 million mt WoW, an increase of 11.6%. Shipments from Australia and Brazil rebounded significantly, while those from non-mainstream countries such as South Africa, India, and Peru declined. SMM China iron ore arrivals totaled 23.96 million mt, down 2.08 million mt WoW, a decrease of approximately 8%. Short-term supply pressure remains relatively limited. This week marks the final stage of concentrated restocking by steel mills, with demand continuing to support ore prices. Additionally, strong market expectations for subsequent policy announcements further reinforce ore price resilience. Overall, iron ore prices are expected to maintain a strong, rangebound fluctuating trend in the short term.

IRON ORE INDEX SPECIFICATIONS, COMPILATION RATIONALE AND DATA EXCLUSIONS

Iron Ore Index Specifications (Port and Seaborne)					Iron Ore Index Compilation Rationale and Data Exclusions
Fe %	65% Fe Fines	62% Fe Fines	58% Fe Fines	62.5% Fe Lump	MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.
Alumina %	65.00	62.00	58.00	62.50	
Silica%	1.40	2.25	2.25	1.50

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
