MARKET COMMENTARY

DCE iron ore futures market falling sharply trends by 2.61%. the main contract I2401 closed 951. Some traders adopt separate quotations, Some steel mills tended to be wait-and-see, and purchased on demand. today's overall market transaction atmosphere in general. PBF at Shandong port dealt 973-975 yuan/mt; decreased 20 yuan/mt over yesterday. PBF at Shandong port dealt 987-988 yuan/mt; decreased 12-13 yuan/mt over yesterday. Yesterday evening, the National Development and Reform Commission conducted a survey on the price index of steel, iron ore and other varieties, indicating that regulatory pressure continues to increase. The market sentiment is relatively cautious, with reduced speculative trading and a significant decline in futures trading. The recent increase in iron ore supply has weakened fundamental support. It is expected that the short-term iron ore prices will continue to fluctuate weakly.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
