IRON ORE SEABORNE INDEX (IOSI)

MARKET COMMENTARY

Mar 19th, 2026		CFR Qingdao, USD/dry tonne							Today , DCE iron ore futures remained in the doldrums today. The most-traded contract, I2605, finally closed at 807.5 yuan/mt, down 0.55% from the previous trading day. Spot prices saw limited transactions and fell by about 2-5 yuan from the previous trading day. Traders offered quotes in line with market conditions, while steel mills remained cautious and watchful, with some purchasing as needed. According to the SMM survey, as of March 19, total inventory across the 10 ports tracked by SMM stood at 119.62 million mt, up 630,000 mt MoM. Inventory trends among mainstream products diverged, with IOCI fines and Newman fines seeing notable destocking. Inventory of Jimblebar fines posted a slight decline. In addition, inventory of PB fines and Mac fines increased slightly. In the short term, improved demand in iron ore fundamentals provided support for futures prices. However, close attention should be paid to tomorrow's long-term contract negotiations and the conflict in the Middle East, both of which may have a significant impact on iron ore prices.

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
