MARKET COMMENTARY

Today, DCE iron ore futures market weakened, with the most-traded contract I2601 closing at 785.5 yuan, down 0.32% from the previous trading day. Traders sold at market prices; as the weekend approached, steel mills' purchase willingness declined. Overall market trading sentiment was moderate. In Shandong, PB fines traded at 790–793 yuan/mt, up 0–3 yuan/mt from the previous day; in Hebei, 60.8% PB fines traded at 795–800 yuan/mt, also up 0–3 yuan/mt.

As of November 21, SMM statistics showed that iron ore inventories across 35 ports nationwide totaled 137.45 million mt, down 640,000 mt WoW. The average daily port pick-up volume this week was 2.844 million mt, down 61,000 mt WoW. Looking ahead to next week, port arrivals are expected to rebound, while hot metal production may continue to pull back, and port pick-up volume could decline further, potentially leading to renewed inventory accumulation at ports. Iron ore prices remain under pressure, and ore prices are expected to continue fluctuating rangebound with a weak tone next week.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
