IRON ORE SEABORNE INDEX (IOSI)

MARKET COMMENTARY

Sep 6th, 2024		CFR Qingdao, USD/dry tonne							<small>Today, iron ore futures fluctuated downward, the most-traded contract 12501 increased positions and fell in the morning, rebounded slightly in the afternoon as some shorts exited, and finally closed at 684 yuan/mt, down 0.07% for the day, as the weekend approached, traders showed weak willingness to sell, steel mills' inquiries were acceptable, but their purchase willingness was average, the market transaction atmosphere remained sluggish today, in Shandong, pb fines traded at around 685-690 yuan/mt, up 5 yuan/mt from yesterday; in Tangshan, pb fines traded at 705 yuan/mt, up 5 yuan/mt from yesterday. As of September 6, the total inventory at the 35 ports tracked by SMM was 150.72 million mt, up 250,000 mt w/w and up 35.05 million mt. yoy, recently, iron ore prices have continued to decline significantly, coupled with low in-plant inventory at steel mills, leading to some restocking demand, the daily average port pick-up volume of imported ore increased by 50,000 mt w/w to 2.919 million mt, recently, steel mill profits have somewhat recovered, and the pace of blast furnace resumption has accelerated, coupled with pre-mid-autumn festival restocking, iron ore demand is expected to pick up next week, and the fundamentals will continue to improve, however, considering the increasing market concerns about economic recession, the market atmosphere remains sluggish, and the apparent demand for steel is weak, it is expected that iron ore prices will not have a significant rebound opportunity in the short term and may continue to fluctuate downward.</small>

IRON ORE INDEX SPECIFICATIONS, COMPILATION RATIONALE AND DATA EXCLUSIONS

Iron Ore Index Specifications (Port and Seaborne)					Iron Ore Index Compilation Rationale and Data Exclusions
	65% Fe Fines	62% Fe Fines	58% Fe Fines	62.5% Fe Lump	MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data. For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com
Fe %	65.00	62.00	58.00	62.50

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
