MARKET COMMENTARY

Today, the Dalian Commodity Exchange iron ore futures market held up well, with the most-traded contract I2509 closing at 707, up 1% for the day. Traders showed good enthusiasm for selling, while steel mills adopted a cautious wait-and-see attitude, with most conducting tenders as usual. The market transaction sentiment was moderate. In Shandong, the mainstream transaction prices of PB fines were around 725-730 yuan/mt, rising slightly by 5-10 yuan/mt from yesterday's prices. In Tangshan, the transaction prices of PB fines were around 740-745 yuan/mt, also rising slightly by 5-10 yuan/mt from yesterday's prices.

Optimistic signals from the China-US-London negotiations boosted market sentiment, driving the futures market to rise amid fluctuations. SMM data showed that the decline in pig iron production narrowed this week, and the blast furnace operating rate remained resilient. In the short term, the high daily average pig iron output provided support for ore prices. However, as south China entered the plum rain season, steel

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
